FLYING FISHERMAN TURNS ON THE STYLE WITH ITS LATEST ADDITIONS

Flying Fisherman, the Florida Keys sunglasses specialist, has introduced three new frames to its 2016 Master Angler RhinoLens polarised series for anglers.

The **Bahia**, named after the island of Bahia Honda in the lower Keys and known for great tarpon fishing, is a medium-fit, wrap frame in a stylish, on-trend design with premium polarised protection. The matte black frames feature eight-base lenses in smoke, matte black, smoke-blue mirror and matte tortoise amber.

Anglers looking for a super lightweight, semi-rimless style are catered for with the **Edge**. These medium-fit sunglasses have nose and temple pads made from megol (a soft touch plastic compound with a rubber feel) to keep them securely in place, even in wet conditions.

The frames of the Edge are matte black with amber or smoke lenses and, at only four ounces, it's easy to forget you are wearing them, says the manufacturer.

The **Triton** is inspired by the mythological Greek god and messenger of the sea and combines good looks with hardcore functionality in a large, square-wrap frame.

The wider temples have non-slip rubber pads to ensure they stay put and provide all day comfort. Frame and lens colour options are matte black smoke, amber, blue mirror and vermillion – the latter proving popular with Flying Fisherman's pro staff as great sight-fishing colour.

New in the Master Angler range: the Edge [top] and Triton [right].

UPDATES FROM THE WORLD'S LEADING EYEWEAR COMPANIES

All frames in the Master Angler series are made from tough TR90 Grilamid, a solid, high-performance polymer ideally suited to the demands of fishing. They also feature virtually shatterproof RhinoLenses™ to offer complete protection, not just against harmful UV rays but also from other dangers like flying hooks, lures and other debris.

In addition, the series benefits from the manufacturer's AcuTint™ lens colouring system. This provides crystal-clear polarised optics, eliminating reflected glare and adding contrast without distorting natural colours. The result is sharper vision that allows anglers to see below the water's surface to spot fish and structure more easily.

The industry-leading brand has also added five new-for-2016 models – the Helm, Razor, Madeira, Kili and Remora Jr. Angler – to its competitively priced Action Angler series. The collection totals 30 sunglass styles for men, women and kids, all featuring Triacetate polarised lenses with the company's AcuTint™ lens colouring system.
